pganalyze provides deep, actionable insights into Postgres.

Specializing in PostgreSQL database monitoring and optimization, pganalyze gives automatic insights into Postgres query plans, helps improve Postgres query performance with its Index Advisor and VACUUM Advisor, and lets you perform query drill-down analysis, observe per-query statistics and conduct trend analysis - all in one platform that integrates with both self-managed Postgres servers as well as Database-as-a-service providers like Amazon RDS.

DBAs and developers use pganalyze to identify the root cause of performance issues, to optimize queries, and to get alerts about critical issues. pganalyze surfaces **opportunities** to optimize Postgres performance and gives **recommendations** that help speed up queries. It comes with helpful security features like PII filtering and SSO integration.

Today, hundreds of customers with teams ranging from 5 to thousands of engineers are using pganalyze in the cloud or on-premise.

Get started easily with a [free 14-day trial](#), or [learn more about our Enterprise product](#).  
If you want, you can also [request a personal demo](#).

*"Our overall usage of Postgres is growing, as is the amount of data we're storing and the number of users that interact with our products. pganalyze is essential to making our Postgres databases run faster, and makes sure end-users have the best experience possible."*
